PROJECT CHARTER

Project: Student Registration System (SRS)

Version: 1.0

Status: Draft

Prepared By: Maha Darwesh

Date: August 2024

1. Project Overview

The Student Registration System (SRS) is a web-based solution that automates course registration and academic administration.

2. Business Need

Replace manual registration, reduce errors, improve efficiency, and provide real-time academic information.

3. Project Purpose

Develop a secure and scalable registration platform for students, instructors, and administrators.

4. Business Objectives

- Automate registration
- Reduce processing time
- Improve data accuracy
- Increase student satisfaction
- Provide real-time reports

5. Project Scope

In Scope: Student, Course, Department, Registration, Semester, Reports.

Out of Scope: LMS, Library, HR, Payroll, Hostel.

6. High-Level Requirements

Online registration, prerequisite validation, schedule conflict detection, seat availability, RBAC, reporting.

7. Major Deliverables

Business Case, Project Charter, BRD, SRS, ERD, Wireframes, RTM, Test Cases, User Manual.

8. Assumptions

Internet access, stakeholder availability, approved academic policies.

9. Constraints

Budget, timeline, academic calendar, legacy systems.

10. Risks

Resistance to change, data migration, security, schedule delays.

11. Major Milestones

Business Analysis (3 weeks), Design (2), Development (8), Testing (3), UAT (2), Deployment (1).

12. Success Criteria

Registration time <5 minutes, errors <2%, 99.9% availability, >95% student satisfaction.

13. Project Organization

Sponsor, Project Manager, Business Analyst, Development Team, QA Team, Registrar, Students
