

FUNCTIONAL REQUIREMENTS

STUDENT REGISTRATION SYSTEM

PREPARED BY: MAHA DARWESH – BUSINESS ANALYST
DOCUMENT VERSION: 1.0
STATUS: DRAFT
DATE: AUGUST 2024

Contents

Functional Requirements Index	2
FR-001 – User Login	3
FR-002 – Forgot Password	3
FR-003 – Change Password	4
FR-004 – User Logout	4
FR-005 – Account Lockout	5
FR-006 – Session Timeout	5
FR-007 – Remember Me	6
FR-008 – Multi-Factor Authentication (MFA)	6
FR-009 – Concurrent Session Management	7
FR-010 – Role-Based Access Control (RBAC)	7
FR-011 – Student Registration & Enrollment Management	8
FR-012 – Course Search & Section Availability	8
FR-013 – Prerequisite & Co-requisite Validation	9
FR-014 – Schedule Conflict Validation	9
FR-015 – Credit-Hour Limit Validation	9
FR-016 – Hold & Academic Eligibility Validation	10
FR-017 – Registration Window & Deadline Validation	10
FR-018 – Real-Time Seat Capacity & Concurrency Control	11
FR-019 – Duplicate Request Prevention & Idempotency	11
FR-020 – Add / Drop / Withdraw Management	12
FR-021 – Waitlist Management	12
FR-022 – Schedule & Registration Status Synchronization	13
FR-023 – Tuition & Fee Calculation	13
FR-024 – Invoice & Student Account Posting	14
FR-025 – Online Payment Processing	14
FR-026 – Scholarships, Waivers & Discounts	15
FR-027 – Notifications & Communications	15
FR-028 – Exception & Approval Workflow Management	16
FR-029 – Academic Policy & Rule Administration	16
FR-030 – Course Section & Offering Administration	17
FR-031 – Audit Trail & Compliance Monitoring	17
FR-032 – Reporting & Management Dashboards	18
FR-033 – Student Profile & Academic Status Management	18

FR-034 – Academic Term & Calendar Management	19
FR-035 – Enterprise Integration & Data Synchronization	19

Functional Requirements Index

ID	Requirement	Module	Priority
FR-001	User Login	Authentication	High
FR-002	Forgot Password	Authentication	High
FR-003	Change Password	Authentication	High
FR-004	User Logout	Authentication	High
FR-005	Account Lockout	Authentication	High
FR-006	Session Timeout	Authentication	High
FR-007	Remember Me	Authentication	Medium
FR-008	Multi-Factor Authentication (MFA)	Authentication	High
FR-009	Concurrent Session Management	Authentication	High
FR-010	Role-Based Access Control (RBAC)	Authorization & Access Control	High
FR-011	Student Registration & Enrollment Management	Registration & Enrollment	High
FR-012	Course Search & Section Availability	Course Search & Registration	High
FR-013	Prerequisite & Co-requisite Validation	Academic Eligibility Validation	Critical
FR-014	Schedule Conflict Validation	Registration Controls	Critical
FR-015	Credit-Hour Limit Validation	Registration Controls	Critical
FR-016	Hold & Academic Eligibility Validation	Registration Controls	High
FR-017	Registration Window & Deadline Validation	Registration Controls	High
FR-018	Real-Time Seat Capacity & Concurrency Control	Registration Controls	High
FR-019	Duplicate Request Prevention & Idempotency	Registration Controls	High
FR-020	Add / Drop / Withdraw Management	Enrollment Lifecycle	High
FR-021	Waitlist Management	Enrollment Lifecycle	High
FR-022	Schedule & Registration Status Synchronization	Enrollment Lifecycle	High
FR-023	Tuition & Fee Calculation	Financial Management	High
FR-024	Invoice & Student Account Posting	Financial Management	High
FR-025	Online Payment Processing	Financial Management	High
FR-026	Scholarships, Waivers & Discounts	Financial Management	High

FR-027	Notifications & Communications	Notifications & Communications	High
FR-028	Exception & Approval Workflow Management	Governance	High
FR-029	Academic Policy & Rule Administration	Academic Operations	High
FR-030	Course Section & Offering Administration	Academic Operations	High
FR-031	Audit Trail & Compliance Monitoring	Governance & Assurance	High
FR-032	Reporting & Management Dashboards	Reporting & Analytics	Medium
FR-033	Student Profile & Academic Status Management	Student Administration	High
FR-034	Academic Term & Calendar Management	Academic Operations	High
FR-035	Enterprise Integration & Data Synchronization	Integration	High

FR-001 – User Login

Requirement ID	FR-001
Requirement Name	User Login
Module	Authentication
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall authenticate active authorized users using approved university credentials and grant access according to their assigned role.
Business Value	Provide secure and controlled access to the Student Registration System.
Trigger	User selects Login and submits credentials.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authentication/security NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-001

FR-002 – Forgot Password

Requirement ID	FR-002
Requirement Name	Forgot Password
Module	Authentication
Requirement Type	Functional
Priority	High
Status	Draft

Requirement Statement	The system shall allow eligible users to securely reset a forgotten password after successful identity verification using an approved recovery channel.
Business Value	Reduce support requests while maintaining account security.
Trigger	User selects Forgot Password.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authentication/security NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-002

FR-003 – Change Password

Requirement ID	FR-003
Requirement Name	Change Password
Module	Authentication
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall allow authenticated users to change their password in accordance with the university password policy.
Business Value	Improve account security and support password lifecycle management.
Trigger	User selects Change Password.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authentication/security NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-003

FR-004 – User Logout

Requirement ID	FR-004
Requirement Name	User Logout
Module	Authentication
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall securely terminate the current authenticated session when the user logs out and prevent further use of the terminated session.
Business Value	Protect user information and prevent unauthorized session reuse.
Trigger	User selects Logout.

Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authentication/security NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-004

FR-005 – Account Lockout

Requirement ID	FR-005
Requirement Name	Account Lockout
Module	Authentication
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall temporarily lock or otherwise restrict an account after the configured number of consecutive failed authentication attempts, in accordance with security policy.
Business Value	Reduce the risk of brute-force and credential-guessing attacks.
Trigger	Configured failed-login threshold is reached.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authentication/security NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-005

FR-006 – Session Timeout

Requirement ID	FR-006
Requirement Name	Session Timeout
Module	Authentication
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall automatically terminate or lock an authenticated session after the configured period of inactivity and require re-authentication as defined by security policy.
Business Value	Reduce unauthorized access from unattended sessions.
Trigger	The authenticated session reaches the configured inactivity threshold.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authentication/security NFRs

Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-006

FR-007 – Remember Me

Requirement ID	FR-007
Requirement Name	Remember Me
Module	Authentication
Requirement Type	Functional
Priority	Medium
Status	Draft
Requirement Statement	The system shall allow eligible non-privileged users to use a persistent sign-in option when permitted by security policy, without bypassing required re-authentication controls.
Business Value	Improve usability while preserving security controls.
Trigger	An eligible user selects Remember Me during authentication.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authentication/security NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-007

FR-008 – Multi-Factor Authentication (MFA)

Requirement ID	FR-008
Requirement Name	Multi-Factor Authentication (MFA)
Module	Authentication
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall require and verify an approved additional authentication factor when MFA is required by account type, role, risk, or security policy.
Business Value	Strengthen authentication for privileged or higher-risk access.
Trigger	Primary authentication succeeds and MFA is determined to be required.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authentication/security NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-008

FR-009 – Concurrent Session Management

Requirement ID	FR-009
Requirement Name	Concurrent Session Management
Module	Authentication
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall enforce configured concurrent-session rules and allow authorized users to view or terminate their active sessions where permitted.
Business Value	Reduce session misuse and provide control over active access.
Trigger	A user creates, views, or terminates an authenticated session.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authentication/security NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-009

FR-010 – Role-Based Access Control (RBAC)

Requirement ID	FR-010
Requirement Name	Role-Based Access Control (RBAC)
Module	Authorization & Access Control
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall authorize access to protected functions and data according to the user's assigned role and permissions.
Business Value	Ensure users can access only functions and data permitted for their responsibilities.
Trigger	A user requests a protected function/data object or an administrator changes role assignments.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authorization/security NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-010

FR-011 – Student Registration & Enrollment Management

Requirement ID	FR-011
Requirement Name	Student Registration & Enrollment Management
Module	Registration & Enrollment
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall allow eligible students to add, register for, or otherwise manage course-section enrollment in accordance with academic and registration rules.
Business Value	Enable controlled self-service enrollment while enforcing university policy.
Trigger	A student submits a registration or enrollment action for a course section.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Performance, availability and transaction-integrity NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-011

FR-012 – Course Search & Section Availability

Requirement ID	FR-012
Requirement Name	Course Search & Section Availability
Module	Course Search & Registration
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall allow authorized users to search published course sections using supported criteria and view current section availability.
Business Value	Enable students and staff to identify suitable course offerings before registration.
Trigger	User opens Course Search for an academic term and enters search criteria.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Search performance and availability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-012

FR-013 – Prerequisite & Co-requisite Validation

Requirement ID	FR-013
Requirement Name	Prerequisite & Co-requisite Validation
Module	Academic Eligibility Validation
Requirement Type	Functional
Priority	Critical
Status	Draft
Requirement Statement	The system shall validate that a student satisfies all applicable prerequisite and co-requisite rules before enrollment is confirmed.
Business Value	Prevent enrollment that violates academic progression rules.
Trigger	An enrollment request requires prerequisite/co-requisite validation.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Validation performance and auditability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-013

FR-014 – Schedule Conflict Validation

Requirement ID	FR-014
Requirement Name	Schedule Conflict Validation
Module	Registration Controls
Requirement Type	Functional
Priority	Critical
Status	Draft
Requirement Statement	The system shall detect schedule conflicts between the requested section and the student's existing or pending schedule and block or route the request according to policy.
Business Value	Prevent incompatible class schedules and registration errors.
Trigger	A student submits an add/register request for a course section.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Validation performance NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-014

FR-015 – Credit-Hour Limit Validation

Requirement ID	FR-015
-----------------------	--------

Requirement Name	Credit-Hour Limit Validation
Module	Registration Controls
Requirement Type	Functional
Priority	Critical
Status	Draft
Requirement Statement	The system shall validate the student's resulting registered credit load against applicable minimum and maximum credit-hour limits before confirming enrollment.
Business Value	Prevent registration beyond approved academic load limits.
Trigger	An enrollment action changes the student's registered credit load.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Validation performance and auditability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-015

FR-016 – Hold & Academic Eligibility Validation

Requirement ID	FR-016
Requirement Name	Hold & Academic Eligibility Validation
Module	Registration Controls
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall evaluate applicable registration holds and academic eligibility restrictions before allowing enrollment and shall prevent or route restricted requests according to policy.
Business Value	Ensure registration restrictions and holds are consistently enforced.
Trigger	A student submits an enrollment-related request.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Validation performance and auditability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-016

FR-017 – Registration Window & Deadline Validation

Requirement ID	FR-017
Requirement Name	Registration Window & Deadline Validation
Module	Registration Controls
Requirement Type	Functional

Priority	High
Status	Draft
Requirement Statement	The system shall validate that registration, add, drop, and withdrawal actions occur within the applicable academic term windows and deadlines unless an approved exception applies.
Business Value	Enforce academic calendar and registration deadlines consistently.
Trigger	A user submits a time-sensitive enrollment action.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Time consistency and availability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-017

FR-018 – Real-Time Seat Capacity & Concurrency Control

Requirement ID	FR-018
Requirement Name	Real-Time Seat Capacity & Concurrency Control
Module	Registration Controls
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall maintain current section seat availability and prevent over-enrollment when concurrent registration requests compete for limited seats.
Business Value	Protect seat-capacity integrity during high-volume registration.
Trigger	An eligible enrollment request reaches seat-allocation processing.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Concurrency, performance and transaction-integrity NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-018

FR-019 – Duplicate Request Prevention & Idempotency

Requirement ID	FR-019
Requirement Name	Duplicate Request Prevention & Idempotency
Module	Registration Controls
Requirement Type	Functional
Priority	High
Status	Draft

Requirement Statement	The system shall detect and safely handle duplicate enrollment requests so that repeated submissions do not create duplicate registrations, charges, or seat allocations.
Business Value	Protect transactional integrity and prevent duplicate processing.
Trigger	The system receives repeated or retried enrollment requests for the same intended action.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Transaction-integrity and reliability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-019

FR-020 – Add / Drop / Withdraw Management

Requirement ID	FR-020
Requirement Name	Add / Drop / Withdraw Management
Module	Enrollment Lifecycle
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall allow authorized users to add, drop, or withdraw from course sections according to applicable deadlines, eligibility rules, approvals, and academic policy.
Business Value	Support the complete enrollment lifecycle with consistent policy enforcement.
Trigger	A student or authorized staff member initiates an add, drop, or withdrawal action.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Performance, auditability and transaction-integrity NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-020

FR-021 – Waitlist Management

Requirement ID	FR-021
Requirement Name	Waitlist Management
Module	Enrollment Lifecycle
Requirement Type	Functional
Priority	High
Status	Draft

Requirement Statement	The system shall place eligible students on a section waitlist when configured conditions are met, maintain waitlist priority, and process seat opportunities according to policy.
Business Value	Provide fair and controlled handling of demand when sections are full.
Trigger	An eligible student requests a full section or a seat becomes available.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Concurrency, notification and auditability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-021

FR-022 – Schedule & Registration Status Synchronization

Requirement ID	FR-022
Requirement Name	Schedule & Registration Status Synchronization
Module	Enrollment Lifecycle
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall synchronize confirmed enrollment changes with the student's schedule and registration status so that all affected views reflect the current state.
Business Value	Maintain consistent enrollment information across student-facing and administrative functions.
Trigger	An enrollment status changes.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Data consistency and integration NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-022

FR-023 – Tuition & Fee Calculation

Requirement ID	FR-023
Requirement Name	Tuition & Fee Calculation
Module	Financial Management
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall calculate tuition and applicable fees based on confirmed enrollment, credit load, student attributes, and configured financial rules.

Business Value	Produce accurate charges resulting from registration activity.
Trigger	A registration change requires financial recalculation.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Calculation accuracy, performance and auditability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-023

FR-024 – Invoice & Student Account Posting

Requirement ID	FR-024
Requirement Name	Invoice & Student Account Posting
Module	Financial Management
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall generate or update applicable student charges and post approved financial transactions to the student account following enrollment-related changes.
Business Value	Maintain accurate student account balances and financial records.
Trigger	A billable enrollment or fee event is confirmed.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Financial integrity, auditability and integration NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-024

FR-025 – Online Payment Processing

Requirement ID	FR-025
Requirement Name	Online Payment Processing
Module	Financial Management
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall allow eligible users to initiate and record online payments through approved payment services and update payment status based on the authoritative transaction result.
Business Value	Support secure and traceable settlement of student charges.
Trigger	A user selects an eligible online payment action.

Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Security, payment integration, reliability and auditability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-025

FR-026 – Scholarships, Waivers & Discounts

Requirement ID	FR-026
Requirement Name	Scholarships, Waivers & Discounts
Module	Financial Management
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall apply eligible scholarships, waivers, and discounts to student charges according to configured rules, effective dates, and authorization controls.
Business Value	Ensure approved financial assistance is applied accurately and consistently.
Trigger	A charge is calculated or an approved award/waiver becomes applicable.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Calculation accuracy and auditability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-026

FR-027 – Notifications & Communications

Requirement ID	FR-027
Requirement Name	Notifications & Communications
Module	Notifications & Communications
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall send configured notifications for significant registration, waitlist, approval, payment, and account events through approved communication channels.
Business Value	Keep users informed of important actions, decisions, and required follow-up.
Trigger	A configured business event requiring notification occurs.

Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Delivery reliability, security and availability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-027

FR-028 – Exception & Approval Workflow Management

Requirement ID	FR-028
Requirement Name	Exception & Approval Workflow Management
Module	Governance
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall route eligible exception requests to authorized approvers, track decisions and status, and apply approved outcomes according to policy.
Business Value	Provide controlled handling of policy exceptions with clear accountability.
Trigger	A user submits an exception or approval request.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Auditability, authorization and notification NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-028

FR-029 – Academic Policy & Rule Administration

Requirement ID	FR-029
Requirement Name	Academic Policy & Rule Administration
Module	Academic Operations
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall allow authorized administrators to create, update, activate, deactivate, and maintain configurable academic and registration rules with effective dates and audit history.
Business Value	Enable controlled policy administration without uncontrolled system changes.
Trigger	An authorized administrator maintains an academic or registration rule.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Authorization, auditability and configuration-integrity NFRs

Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-029

FR-030 – Course Section & Offering Administration

Requirement ID	FR-030
Requirement Name	Course Section & Offering Administration
Module	Academic Operations
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall allow authorized staff to create and maintain course sections and term offerings, including capacity, schedule, instructor, status, and other configured offering attributes.
Business Value	Maintain accurate course offerings used by search and registration processes.
Trigger	Authorized staff create or modify a course section or offering.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Data integrity, authorization and auditability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-030

FR-031 – Audit Trail & Compliance Monitoring

Requirement ID	FR-031
Requirement Name	Audit Trail & Compliance Monitoring
Module	Governance & Assurance
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall record auditable events for security-sensitive, registration, approval, policy, and financial actions with sufficient information to support authorized review and compliance monitoring.
Business Value	Provide traceability, accountability, and evidence for operational and compliance review.
Trigger	An auditable business or security event occurs.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Audit integrity, retention, security and availability NFRs

Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-031

FR-032 – Reporting & Management Dashboards

Requirement ID	FR-032
Requirement Name	Reporting & Management Dashboards
Module	Reporting & Analytics
Requirement Type	Functional
Priority	Medium
Status	Draft
Requirement Statement	The system shall provide authorized users with operational reports and management dashboards based on permitted registration, academic, financial, and service data.
Business Value	Support operational monitoring and management decision-making.
Trigger	An authorized user requests a report or dashboard.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Reporting performance, data freshness and authorization NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-032

FR-033 – Student Profile & Academic Status Management

Requirement ID	FR-033
Requirement Name	Student Profile & Academic Status Management
Module	Student Administration
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall allow authorized users to view and maintain permitted student profile and academic-status information while enforcing data ownership and access controls.
Business Value	Maintain accurate student information required by registration and academic processes.
Trigger	An authorized user views or updates student profile or academic-status data.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Privacy, authorization, data integrity and auditability NFRs

Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-033

FR-034 – Academic Term & Calendar Management

Requirement ID	FR-034
Requirement Name	Academic Term & Calendar Management
Module	Academic Operations
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall allow authorized administrators to maintain academic terms, registration windows, deadlines, and related calendar dates used by registration processes.
Business Value	Provide authoritative dates for time-dependent registration and academic rules.
Trigger	Authorized staff create or update academic term/calendar configuration.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.
Related Non-Functional Requirements	Configuration integrity, authorization and auditability NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-034

FR-035 – Enterprise Integration & Data Synchronization

Requirement ID	FR-035
Requirement Name	Enterprise Integration & Data Synchronization
Module	Integration
Requirement Type	Functional
Priority	High
Status	Draft
Requirement Statement	The system shall exchange and synchronize required data with approved enterprise systems using controlled interfaces and shall handle integration failures without creating inconsistent business records.
Business Value	Maintain consistent information across dependent university systems.
Trigger	A configured integration event, schedule, or business transaction requires data exchange.
Related Business Rules	Reference applicable Business Rules Catalog IDs in the RTM / rule mapping.

Related Non-Functional Requirements	Integration security, reliability, observability and data-consistency NFRs
Acceptance Criteria	To be verified through the related Use Case and test/UAT scenarios; the stated functional behavior must be demonstrably satisfied.
Related Use Case	UC-035
