Glossary

Acronym	Meaning
BA	Business Analyst
BRD	Business Requirements Document
SRS	Software Requirements Specification
RTM	Requirement Traceability Matrix

1. Executive Summary

The Student Registration System project aims to modernize and automate the university's course registration process. The current registration process relies on multiple manual activities, resulting in registration delays, scheduling conflicts, validation errors, and increased administrative workload.

The proposed solution will provide students with a secure self-service portal to search for available courses, register for classes, manage their schedules, complete tuition payment processes, and receive real-time notifications. The system will automatically validate registration rules such as prerequisites, seat availability, credit hour limits, financial holds, and scheduling conflicts.

The project is expected to improve the student experience, reduce manual processing, increase operational efficiency, and ensure compliance with university academic policies

2. Business Problems

1. Manual Registration Process

The current registration process relies heavily on manual procedures, leading to delays in processing student registrations and increasing administrative workload.

2. High Risk of Human Errors

Manual validation of prerequisites, credit hours, and schedule conflicts increases the likelihood of registration errors and inconsistent academic records.

3. Inefficient Record Management

Student registration records are difficult to store, retrieve, and track efficiently, resulting in longer response times and increased operational effort.

4. Limited Visibility

Students do not receive real-time information regarding seat availability, registration status, or payment status.

5. Lack of Automation

Many business processes such as validation, fee calculation, notifications, and reporting require manual intervention.

3. Business Objectives

1. Reduce the average student registration processing time by at least 60% compared to the current manual process.
2. Improve student satisfaction by providing a secure and user-friendly self-service registration portal.
3. Reduce manual registration errors by automating validation rules and business processes.
4. Automate key registration activities including course registration, fee calculation, notifications, and approval workflows.
5. Ensure compliance with university academic and financial policies through automated business rule enforcement.

4. Project Scope

4.1 In Scope

- Student Login & Authentication
- Course Search
- Course Registration
- Add/Drop Courses
- Course Withdrawal

- Schedule Management
- Prerequisite Validation
- Credit Hour Validation
- Schedule Conflict Validation
- Seat Availability Validation
- Financial Hold Validation
- Tuition Fee Calculation
- Invoice Generation
- Online Payment Integration
- Notifications (In-App & Email)
- Student Dashboard
- Registration History
- Exception Request Workflow
- Approval Workflow
- Reports & Dashboards
- Audit Logs
- User & Role Management

4.2 Out of Scope

- Learning Management System (LMS)
- Student Housing Management
- Library Management
- Human Resources Management
- Payroll

- Alumni Management
- Mobile Application (Future Enhancement)
- SMS Gateway Integration (Future Phase)
- AI Academic Advising
- Graduation Clearance Process

5. Stakeholders

Stakeholder	Role	Responsibilities
Project Sponsor	Project Owner	Provides funding, approves project scope, and makes strategic decisions.
Registrar	Business Owner	Defines and validates registration policies and academic rules.
Finance Manager	Business Stakeholder	Defines tuition fee calculation, payment, and financial hold rules.
Department Head	Business Stakeholder	Approves exceptions and academic overrides.
Students	End Users	Register courses, manage schedules, and complete payments.
IT Department	Technical Team	Designs, develops, and maintains the system.
System Administrator	Administrator	Manages users, permissions, and system configuration.

6. Business Requirements

6.1 Student Registration Management

ID	Business Requirement	Priority	Business Value
BR-001	The university shall provide students with a secure online self-service course registration process.	High	High
BR-002	The university shall enable students to search and select available course offerings.	High	High

ID	Business Requirement	Priority	Business Value
BR-003	The university shall ensure compliance with university academic registration policies.	High	High
BR-004	The university shall allow eligible students to add, drop, and withdraw courses during approved registration periods.	High	High
BR-005	The university shall provide immediate registration confirmation.	Medium	High
BR-006	The university shall maintain accurate registration records.	High	High

Sakeholders (Registrar - Students - Department Head)

6.2 Academic Policy Management

This capability ensures that all course registration activities comply with university academic regulations.

ID	Business Requirement	Priority	Business Value
BR-007	The university shall validate prerequisite completion.	High	High
BR-008	The university shall enforce credit hour limits.	High	High
BR-009	The university shall prevent timetable conflicts.	High	High
BR-010	The university shall validate seat availability before registration.	High	High
BR-011	The university shall support approved academic exceptions.	Medium	High

6.3 Tuition & Financial Management

This capability manages tuition calculation, invoicing, payment processing, and financial restrictions.

The university shall calculate tuition fees automatically according to approved financial policies.

ID	Business Requirement	Priority	Business Value
BR-012	Automatically calculate tuition fees.	High	High
BR-013	Generate electronic invoices.	High	High
BR-014	Support online payment.	High	High
BR-015	Prevent registration for students with Financial Hold unless an approved exception exists.	High	High
BR-016	Apply scholarships and discounts according to university policies.	High	High

6.4 Notification Management

This capability ensures timely communication with students regarding registration and financial activities.

ID	Business Requirement	Priority	Business Value
BR-017	Notify students after successful registration.	High	Medium
BR-018	Notify students when registration fails and explain the reason.	High	High
BR-019	Notify students before payment due dates.	Medium	High
BR-020	Notify students when registration status changes.	Medium	Medium

6.5 Administration & Reporting

This capability provides administrative oversight, reporting, and auditing for registration activities.

ID	Business Requirement	Priority	Business Value
BR-021	Maintain a complete audit trail.	High	High
BR-022	Generate operational and management reports.	High	High
BR-023	Allow administrators to manage registration policies.	High	High

7. Assumptions

- Students already have active university accounts.
- The academic calendar is configured before registration opens.
- Course offerings are published before the registration period starts.
- Payment Gateway is available during the registration period.

8. Constraints

- Registration must follow university academic policies.
- The system shall integrate with the existing Student Information System (SIS).
- The project budget and timeline are fixed.
- Only authorized users may access administrative functions.

9. Risks

Risk	Impact	Mitigation
High registration traffic	System slowdown	Load balancing & performance testing
Payment gateway downtime	Payment failures	Retry mechanism and reconciliation
Incorrect prerequisite data	Registration errors	Data validation before semester activation

10. Success Criteria

KPI	Target
Registration processing time	Reduce by 60%
Student Satisfaction	≥ 90%
Manual registration errors	Reduce by 80%
System Availability	≥ 99.5%
Online Registration Adoption	≥ 95%
